Patient Support Program

 **Vyepti**[®]
eptinezumab for injection
100 mg/mL

What is Vyepti®?

Vyepti® is a medicine used to prevent migraine in adults who have at least 4 migraine days per month. Vyepti® should be prescribed by healthcare professionals who are experienced in the diagnosis and treatment of migraine.

How does Vyepti® work?

The active medicinal ingredient in Vyepti® is called eptinezumab.

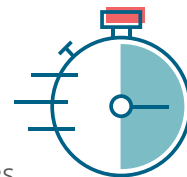

Eptinezumab belongs to a group of substances called monoclonal antibodies. It blocks the activity of a protein called calcitonin gene-related peptide (CGRP).

Increases in CGRP levels in the blood have been linked to migraine.

How to take Vyepti®

Because Vyepti® is given as an intravenous (IV) infusion, **it should only be given by a doctor or nurse.**

The IV infusion lasts about 30 minutes and is given through a needle placed in a vein in the arm, hand, or through a central line.

Your IV infusions can be scheduled and performed by qualified healthcare professionals at a clinic location that's convenient for you through the Vyepti TODAY® Patient Support Program.

Simply ask your doctor or call Vyepti TODAY® at 1-833-8-VYEPTI (893784) for details.

What is the usual dose?

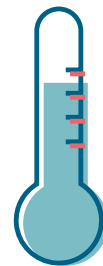

Before starting treatment with Vyepti®, your doctor will determine the amount that's appropriate for you.

The recommended dose of Vyepti® is 100 mg every 12 weeks. However, some patients may benefit from a dosage of 300 mg every 12 weeks.

How to store and handle Vyepti®

Depending on your situation, Vyepti® may be dispensed at your pharmacy, or it may be sent directly from the pharmacy to your infusion clinic.

If you are picking up Vyepti® from your local pharmacy, remember that the medication needs to be maintained between 2-8 °C at all times. Bring a cooler to transport Vyepti® and once home, store in a refrigerator in its original package to protect from light.

Be sure not to freeze or shake Vyepti®.

And finally, make sure to keep Vyepti® out of reach and sight of children.

What are the possible side effects?

During your treatment with Vyepti®, it's possible you may experience some side effects. It's a good idea to discuss this with your doctor or pharmacist.

The most common side effects of treatment with Vyepti® are:

- Stuffy nose and sore throat (nasopharyngitis)
- Allergic reaction (such as rash, swelling, itching, hives, itchy throat or tightness, difficulty breathing and wheezing)
- Reactions due to the infusion (feeling tired, respiratory symptoms such as blocked or runny nose, throat irritation, cough, sneezing, shortness of breath)

Uncommon side effects can include a serious allergic reaction. These reactions can develop quickly during the infusion. Symptoms may include difficulty breathing, fast or weak pulse or sudden drop in blood pressure (making you feel dizzy or lightheaded), swelling of the lips or tongue, severe itching of the skin, or rash.

Get immediate medical help and talk to your healthcare professional if you think you're having a serious allergic reaction.

Keep in mind

These are not all the possible side effects you may feel when taking Vyepti®.

If you have a troublesome symptom or side effect that is not listed here or becomes bad enough to interfere with your daily activities, talk to your healthcare professional.

Important safety info

Before taking Vyepti®

Before taking Vyepti®, there are some things you should discuss with your doctor.

To help avoid side effects and ensure proper use, talk to your doctor before you take Vyepti®. Talk about any health conditions or problems you may have, including:

- Heart disease
- Severe liver or kidney disease
- Alcohol/drug abuse
- Severe mental disorders
- Intolerance to sorbitol

Be sure to also tell your doctor about all the medicines you take, including any drugs, vitamins, minerals, natural supplements or alternative medicines.

My migraine diary

The most useful tool for migraine specialists and patients is the migraine diary. This keeps a record of how frequent and severe your attacks are, your symptoms, your medication history, and more.

After all, you may not remember every detail over the course of 12 weeks! And tracking your triggers, and patterns may help your doctor assess your symptoms.

Complete the logs on the following pages or try the **Canadian Migraine Tracker** app by the Canadian Headache Society.

Other warnings you should know about

Your doctor will help you decide if Vyepti® is right for you, but there are some individuals for whom Vyepti® is not appropriate.

- **Pregnant and breastfeeding women:** Vyepti® has not been studied in pregnant women. Ask your doctor for advice before receiving this medicine, if you: are pregnant or think you may be pregnant, are planning to have a baby, are breastfeeding or planning to breastfeed.
- **Vyepti® contains sorbitol.** Sorbitol is a source of fructose. You must not receive Vyepti® if you have hereditary fructose intolerance (HFI). This rare genetic disorder means your body cannot break down fructose, which may cause serious side effects. You must tell your doctor before receiving this medicine if you have HFI.
- **Children and adolescents:** Vyepti® should not be given to children under 18 years old. The use of Vyepti® has not been studied in children.

Do not use Vyepti® if you are allergic to eptinezumab or any of Vyepti®'s other ingredients (including L-histidine, L-histidine monohydrochloride, polysorbate 80, sorbitol, or water for injection).

Vyepti TODAY[®] Patient Support Program

Now that your physician has made Vyepti[®] part of your treatment plan, we will make every effort to make your journey as smooth as possible.

Whether you're new to this sort of treatment or not, we're here to help. With the Vyepti TODAY[®] Patient Support Program you've got a team of specialists to support you through every step of your care.

The day of your infusion

- Bring a list of your medications
- Drink plenty of water
- Wear comfortable clothes
- Wear layers with a short sleeve shirt
- Take a snack with you
- Bring your phone, a book, or a tablet and headphones

After your infusion, you will be free to leave and continue your normal schedule, as advised by your doctor.

With the Vyepti TODAY[®] Patient Support Program you've got:

One contact + a personal care team

- A dedicated single point of contact to answer all your questions
- Backed by a team of specialists to support you, including a nurse, a pharmacist, and a reimbursement specialist

Support when starting treatment

- Helping you get access to your treatment as soon as possible
- Locating your nearest infusion clinic and booking your first appointment

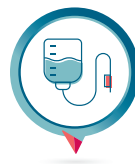

Financial and reimbursement assistance

- Expertise to guide you through every step of reimbursement navigation

Infusion care and coordination

- Qualified healthcare professionals provide care and administer your infusions
- Our team helps you coordinate your appointments

Ongoing support

- We're with you throughout your treatment
- Simply call or email us for one-on-one support
